Cleaning & Maintenance

Polycarbonate is a plastic material that is very durable and shatterproof, that can mimic the clarity and transparency of real glass. Some people are surprised to learn that most airplane windows are made from polycarbonate.

Washing polycarbonate drinkware in the dishwasher must be on a quick cycle and temperature must not exceed 75 degrees. Failing to do may result in the product becoming cloudy or cracking. We recommend you purchase our polycarbonate cleaner as this will help maintain the product longevity.

We back our D-Still Polycarbonate Drinkware with a lifetime chip and break-resistant Guarantee, where the product has been used for its intended purpose and washed according to recommendation, using D-Still branded cleaning chemicals.
